

Dear ,

Coal-fired power plants are the largest source of global warming pollution in the United States. Yet right now, our country is poised to build **many** new dirty coal plants.

[Urge President Obama to oppose the construction of new coal-fired power plants that will make global warming worse.](#)

Bob Fertik

Citizens and Scientists for Environmental Solutions

**Union of
Concerned
Scientists**

Dear President Obama,

Please oppose the construction of new coal-fired power plants that lack the ability to capture and store their carbon dioxide.

Building new pulverized coal plants would lock the United States into decades of dangerous carbon emissions that will make it extremely difficult to avoid the worst consequences of global warming.

[Please ask President Obama to oppose the construction of new coal-fired power plants that will make global warming worse.](#)

Funding of carbon capture and storage technology should be limited to 5 to 10 demonstration plants until the technology is proven to be safe, reliable and cost-effective.

Analysis by the Union of Concerned Scientists has found that the country can meet its near-term energy needs and curb emissions by using readily available renewable energy and energy efficiency technologies.

[President Obama, I urge you to support more aggressive deployment of these cleaner, safer technologies.](#)

Thanks for all you do!
